

How Can Kiwanians Help Improve Early Screening, Diagnosis and Intervention for Children at Risk for Autism or Developmental Delay?

In your local community

- Talk about why Kiwanians support this initiative and the importance of early brain development
- Reach out to community organizations like daycares, churches, anywhere there are kids
- Distribute information about children's development – Set up an early screening booth at local fair, distribute "Are You Screening?" flyer or CDC materials
- Add materials to your local club's website or Facebook page
- Ask if child has been screened

At local primary care offices

- Connect children to primary care for screening
- Link primary care physicians with CHIP IN for Quality team, if they want to start screening
- Offer to read to children in waiting room
- Transportation assistance
- Provide materials for ASQ kit

At your local Early Evaluation Hub

- Replenish STAT kit
 - Goldfish crackers or gluten free snacks, individually wrapped is best
 - Wipes to clean toys
 - Nerf rockets
 - Bubbles
- Supply Safety Kits from Riley Safety Store
- Binders for family resource family binder
- Transportation assistance

Share your ideas and lessons learned or if you have questions, contact:
